

**PUBMLST ISOLATES DATABASE:
RULES-BASED ASSIGNMENT OF *EMM* AND PILIN GENOTYPES
FOR GROUP A STREPTOCOCCI (SPYOGENES)**

Updated February 2024

Contents:

Topic	Page
emm type and subtype	2-3
emm pattern	4-6
emm cluster	6
Pilin alleles	7
pilA and pilB nt80 clusters	8-13
Pilin type	14
FCT-region form	15

Group A streptococci-specific typing resources:

- CDC link (*emm* type deposits):
<https://www2.cdc.gov/vaccines/biotech/strepblast.asp>
- Bessen DE, BW Beall, A Hayes, W Huang, JM DiChiara, S Velusamy, H Tettelin, KA Jolley, JT Fallon, S Chochua, MSA Albaidallah, C Higgs, TC Barnett, JD Steemson, T Proft and MR Davies, 2024. Recombinational exchange of M-fibril and T-pilus genes generates extensive cell surface diversity in the global group A Streptococcus population. *mBio*, under review.

emm type, subtype, cluster and pattern:

1. emm type and subtype assignment

Given the historical importance of *emm* type in group A strep epidemiology, new isolate submissions are **expected** to minimally provide ‘*emm* type’ in addition to the 7 core housekeeping alleles.

- The *emm* type format is a simple number of 1 to 3 digits.
- Allowable values are listed in the Isolate Database template (Excel file).

How to establish *emm* type?

- By the CDC BLAST server: <https://www2.cdc.gov/vaccines/biotech/strepblast.asp>
- By www.pubmlst.org/spyogenes: Sequence queries with whole genome sequences identify exact matches with the PubMLST Sequence Typing Database of *emm* subtypes (i.e., partial allele), which is curated by the CDC and updated to PubMLST every 1-2 months.
 - The *emm* subtype format is *emm*#.#. For e.g., *emm*5.32 or *emm*103.1
 - In the example above, the *emm* types are 5 and 103, respectively.
 - The ***emm* subtype is optional** for new isolate submissions.
 - Some *emm* types (*emmCG*) are derived from a related streptococcal species (e.g., stG6). Please consult with the Curator as to how this information might best be handled.
 - The development of Sequence Typing Databases is ongoing for *emm*-like (*emmL*) genes. This information may be useful in sequence queries but is not yet available in the Isolate Database.
- For sequence queries with multiple *emm* and *emmL* hits: **Which one is *emm*?**
 - The position of the hit with *emmPrime* (~50 nt upstream) establishes the identity of the (downstream) *emm* locus.

Locus	Allele	Length	Contig	Start position	End position
emm	53.0	180	sid 463836 accn CP003068__Streptococcus_pyogenes_Alab49_complete_genome.__[Streptococcus_pyogenes_Alab49]	1656846	1657025
emmL	134.2	180	sid 463836 accn CP003068__Streptococcus_pyogenes_Alab49_complete_genome.__[Streptococcus_pyogenes_Alab49]	1655354	1655553
emmPrime	2	19	sid 463836 accn CP003068__Streptococcus_pyogenes_Alab49_complete_genome.__[Streptococcus_pyogenes_Alab49]	1657073	1657091
mga-2	17	32	sid 463836 accn CP003068__Streptococcus_pyogenes_Alab49_complete_genome.__[Streptococcus_pyogenes_Alab49]	1658718	1658749
SF1	1	26	sid 463836 accn CP003068__Streptococcus_pyogenes_Alab49_complete_genome.__[Streptococcus_pyogenes_Alab49]	1656004	1656029
SF3	1	30	sid 463836 accn CP003068__Streptococcus_pyogenes_Alab49_complete_genome.__[Streptococcus_pyogenes_Alab49]	1654688	1654717
SF4	9	54	sid 463836 accn CP003068__Streptococcus_pyogenes_Alab49_complete_genome.__[Streptococcus_pyogenes_Alab49]	1657468	1657521

- For sequence queries with no *emm* type hits → (possibly) a new *emm* subtype
 - New *emm* subtype assignments are made by the CDC.
 - CDC link: <https://www.cdc.gov/streplab/groupa-strep/index.html>
 - The PubMLST curator can also provide guidance if needed.
 - However - the PubMLST software is not designed to accept new *emm* subtype submissions directly from users.

2. *emm* pattern assignment (optional)

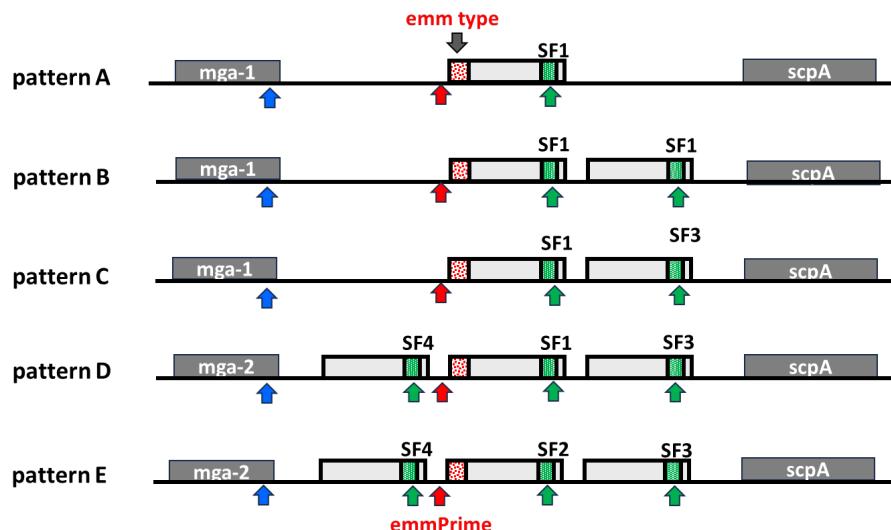

- The Isolate Database has 2 fields for submission of *emm* pattern (optional)
 - emm_pattern_measured*
 - Values** are A-C, D, E, REA (rearranged), A, B, C
 - emm_pattern_predicted*
 - Values** are A-C, D, E, REA (rearranged)

How to establish *emm* pattern (i.e., measured)?

- Combinations of hits with *emm* typing loci are used to measure *emm* pattern.
- Note: The PubMLST databases include nearly all known variants of the (partial) *emm* pattern-typing loci but may not be 100% inclusive. Please contact the Curator if you have new allelic variants and/or wish to submit a direct deposit.

<i>emm</i> pattern	mga-1	mga-2	SF1	SF2	SF3	SF4	<i>emm</i>
A	hit		hit				hit
B	hit		2 hits				hit
C	hit		hit		hit		hit
D		hit	hit		hit	hit	hit
E			hit		hit	hit	hit
REA (example)		hit			hit	hit	hit (or emmL only)

- If the SF hit combination differs from those established for *emm* patterns A through E (above), one can query the genome for each individual SF to identify a new allelic variant (i.e., ≥90% id). The Curator can offer further guidance.

Example (from downloaded xls following sequence query): *emm53*-pattern D

Locus	Allele	Length	Contig	Start position	End position
mga-2	17	32	sid 463836 accn CP003068__Streptococcus_pyogenes_Alab49_complete_genome.	1658718	1658749

How to predict *emm* pattern?

- Previously established associations between *emm* type and *emm* pattern groupings A-C, D and E are presented in the listing below.
- REA is included only for *emm* types for which an *emm* pattern group remains to be established.
- emm* types recovered in association with >1 *emm* pattern group are highlighted.
- Data is based on the mBio 2024 study (Table S1).

emm type	emm pattern group						
1	A-C	56	D	106	E	208	D
2	E	57	A-C	107	E	209	E

3. *emm* cluster assignment (optional)

The Isolates Database allows for entry of 'emm_cluster' based on:

- Sanderson-Smith M, De Oliveira DM, Guglielmini J, McMillan DJ, Vu T, Holien JK, Henningham A, Steer AC, Bessen DE, Dale JB, Curtis N, Beall BW, Walker MJ, Parker MW, Carapetis JR, Van Melderden L, Sriprakash KS, Smeesters PR; M Protein Study Group. *J Infect Dis.* 2014 Oct 15;210(8):1325-38

Values are in **text** format, as listed below.

- Singletons and outliers should be listed in the isolate template xls file in the format exemplified by: clade_Y_M6 and outlier_M55
- If you are uncertain of the proper format, one can examine the Isolate Database.

clade	emm cluster	emm types represented
X	E1	4, 60, 78, 165, 176
X	E2	13, 27, 50, 66, 68, 76, 90, 92, 96, 104, 106, 110, 117, 166, 168
X	E3	9, 15, 25, 44, 49, 58, 79, 82, 87, 103, 107, 113, 118, 144, 180, 183, 209, 219, 231
X	E4	2, 8, 22, 28, 73, 77, 84, 88, 89, 102, 109, 112, 114, 124, 169, 175, 232
X	E5	34, 51, 134, 137, 170, 174, 205
X	E6	11, 42, 48, 59, 63, 65, 67, 75, 81, 85, 94, 99, 139, 158, 172, 177, 182, 191
X	Singletons	164, 185, 211, 236
Y	D1	36, 54, 207
Y	D2	32, 71, 100, 115, 213
Y	D3	123, 217
Y	D4	33, 41, 43, 52, 53, 56, 64, 70, 72, 80, 83, 86, 91, 93, 98, 101, 108, 116, 119, 120, 121, 178, 186, 192, 194, 208, 223, 224, 225, 230, 242
Y	D5	97, 157, 184
Y	A-C1	46, 142
Y	A-C2	30, 197
Y	A-C3	1, 163, 227, 238, 239
Y	A-C4	12, 39, 193, 228, 229
Y	A-C5	3, 31, 133
Y	Singletons	5, 6, 14, 17, 18, 19, 23, 24, 26, 29, 37, 38, 47, 57, 74, 105, 122, 140, 179, 218, 233, 234
Outliers	Outliers	55, 95, 111, 215, 221, 222

FCT-region form, pilin type, pil nt80 sequence clusters and pilin alleles

1. Pilin alleles (optional)

- New pilin alleles can be directly submitted to the Curator for **integer** assignment.
- A listing of pilin loci in the Typing Databases is provided below.
- Details are presented in the mBio 2024 study. Briefly:
 - pilA, adhesin
 - pilB, backbone
 - pilL, linker
 - Numerals refer to FCT-regions forms: 1, 2, 3 and 4 (34), 5, 6, 9, 10.

2. pilA_nt80 and pilB_nt80 clusters (optional).

- nt80 sequence clusters for established pilA and pilB alleles are listed in the charts below.
- nt80 sequence clusters are assigned by the Curator for new pilA and pilB alleles.
- Further details are presented in the mBio 2024 study.
- The Table S1 xls file in the mBio 2024 study lists pilA and pilB alleles and cluster assignments, and data can be readily sorted.
- See example in section #4:

3. Pilin type (optional)

- Pilin type is defined based on the (unique) combination of pilA_nt80 and pilB_nt80 clusters, as listed in the chart below.
- New pilin types are assigned by the Curator.

pilin type	pilA_nt80 cluster	pilB_nt80 cluster	FCT-region form		pilin type	pilA_nt80 cluster	pilB_nt80 cluster	FCT-region form
pil001	nt80_7	nt80_39	FCT-2		pil066	nt80_9	nt80_38	FCT-4

4. FCT-region form (optional)

- The Isolate Database has a field for submission of FCT-region form.
- Allowable **values** are:
 - FCT-1
 - FCT-2
 - FCT-3
 - FCT-4
 - FCT-3/4
 - FCT-5
 - FCT-6
 - FCT-9
 - FCT-10

How to establish FCT-region?

- Combinations of hits are listed in the chart below.
- Note: The PubMLST databases include nearly all known variants of the (partial) rofA/nra and full-length pilin loci but may not be 100% inclusive. Please contact the Curator if you have new allelic variants and/or wish to submit a direct deposit.

FCT-region	rofA	nra	pilA1/pilB1	pilA2/pilB2	pilA34/pilB34	pilA5/pilB5	pilA6/pilB6	pilB9	pilA10/pilB10
1	hit		hit						
2	hit			hit					
3		hit			hit				
4	hit				hit				
3/4					hit				
5	hit					hit			
6	hit						hit		
9	hit							hit	
10	hit								hit

Example: (from downloaded xls following sequence query):

- FCT-4
- pilA34_103 = pilA nt80_13; pilB34_83 = pilB nt80_34
- pil028 = pilA nt80_13 and pilB nt80_34
- Also, emm28-pattern E
